Ordering Information:

Contact us to ensure the correct perfecting jacket for your machine's serial number. To place an order, please call the Heidelberg Parts Team at (800) 437 7388 or email us at parts@heidelberg.com

The best ink-repelling jackets on the market. The future-oriented Heidelberg® impression cylinder jackets excel with their extremely fine-textured surface structure and silicone surface for unmatched printing quality in perfecting mode. Even the most demanding types of paper and printing jobs can be processed without noticeable differences in quality. This results in reduced wash-up times and excellent print quality when using perfecting mode.

Features and Benefits:

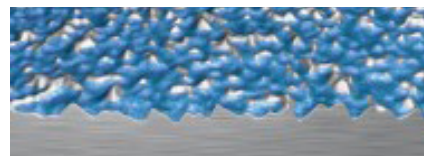

- Mark-free, two sided (perfected) print jobs
- Easy cleaning and increased productivity thanks to reduced wash-up times
- Handles high ink coverage applications
- Wide range of high quality applications on numerous substrates

Perfect Jacket

- Outstanding print quality
- Stainless steel sheet with ink-repellent silicone surface
- Suitable for the highest print quality jobs
- Available for all Speedmaster® models with a perfecting device

Perfect Jacket Professional

- Cost-effective alternative
- Chromium plated nickel with ink-repellent so-gel layer
- Suitable for large run print jobs with consistent print quality
- Available for all Speedmaster models with a perfecting device

Maintenance tips. To maximize the jackets' life expectancy, clean the jackets manually with a suitable Saphira® wash once per use, then wipe clean with a damp cloth. Never apply excessive pressure during cleaning and never use a mechanical aid (e.g. spatulas). We strongly recommend using Saphira Jacket Cleaner 500 for best results and protection.
